(Dr. B for short)
In-class Exercise

Find a project one of you built for a previous course. The program needs to have at least 4 separate class files.

Discuss and document the following in your group:
- the overall design of the project
- any discernable design patterns
- what could be improved (e.g., patterns that could be used)

Note: try not to get defensive if your group picks apart your design... you're a student so you're supposed to be imperfect and learning.
