CS483 Design and Analysis of Algorithms
Lecture 1 Introduction and Prologue

Instructor: Fei Li
lifei@cs.gmu.edu with subject: CS483

Office hours:
Room 5326, Engineering Building, Thursday 4:30pm - 6:30pm or by appointments

Course web-site:
http://www.cs.gmu.edu/~lifei/teaching/cs483_fall11

Figures unclaimed are from the textbook “Algorithm Design”.
About this Course

(From 2007-2008 University Catalog) Analyze computational resources for important problem types by alternative algorithms and their associated data structures, using mathematically rigorous techniques. Specific algorithms analyzed and improved.

Prerequisites
CS310 (Data Structures) and CS330 (Formal Methods and Models) and MATH125 (Discrete Mathematics I)

Weekly Schedule

- When: Tuesday & Thursday 3:00pm - 4:15pm
- Where: Krug Hall 242
Required Textbooks

1. *Algorithm Design* by Jon Kleinberg and Eva Tardos
How to Reach Me and the TA

1. Instructor: Fei Li
2. Email: lifei@cs.gmu.edu
3. Office: Room 5326, Engineering Building
4. Office hours: Thursday 4:30pm - 6:30pm or by appointments

1. Teaching Assistant: Chen Liang
2. Email: cliang1@gmu.edu
3. Office: Room 4456, Engineering Building
4. Office hours: Wednesday 11:00am - 1:00pm
1. Your grade will be determined 45% by the take-home assignments, 20% by a midterm exam, and 35% by a final exam.

2. Tentatively, there will be 9 assignments; each assignment deserves 5 points.

3. Hand in hard copies of assignments in class. No grace days for late assignment. All course work is to be done independently. Plagiarizing the homework will be penalized by maximum negative credit and cheating on the exam will earn you an F in the course.

4. Tentative grading system:
   A ($\geq 85$), B ($\in [70, 85]$), C ($\in [60, 70]$), D ($\in [50, 60]$), and F ($< 50$)

Any Questions?
**Goal.** Given \( n \) men and \( n \) women, find a "suitable" matching.

- Participants rate members of opposite sex.
- Each man lists women in order of preference from best to worst.
- Each woman lists men in order of preference from best to worst.

The Necessity and Benefits of Learning Algorithms

1. Algorithm example — **calculate Fibonacci Numbers**
2. Running time — asymptotic notation
Fibonacci Series and Numbers

0, 1, 1, 2, 3, 5, 8, 13, 21, 34, \ldots,

The Fibonacci numbers $F_n$ is generated by

$$F_n = \begin{cases} 
F_{n-1} + F_{n-2}, & \text{if } n > 1, \\
1, & \text{if } n = 1, \\
0, & \text{if } n = 0.
\end{cases}$$

The golden ratio $\phi = \frac{1 + \sqrt{5}}{2} = 1 + \frac{1}{\phi} \approx 1.618 = \lim_{n \to \infty} \frac{F_{n+1}}{F_n}$.
Calculate $F_n$ — First Approach

From the recursive definition

```java
function fib1(n)
{
    if (n = 0)
        return 0;
    if (n = 1)
        return 1;
    return fib1(n - 1) + fib1(n - 2);
}
```
Calculate $F_n —$ First Approach

From the recursive definition

```python
function fib1(n)
{
    if (n = 0)
        return 0;
    if (n = 1)
        return 1;

    return fib1(n - 1) + fib1(n - 2);
}
```

▶ Correctness
Calculate $F_n$ — First Approach

From the recursive definition

```java
function fib1(n)
{
    if (n = 0)
        return 0;
    if (n = 1)
        return 1;
    return fib1(n - 1) + fib1(n - 2);
}
```

▶ Correctness

▶ Running time $T(n) = T(n - 1) + T(n - 2) + 3$, $n > 1$

$$T(200) \geq F_{200} \geq 2^{138}$$
function fib2(n) 
{
    if (n = 0)
        return 0;
    create an array f[0, ..., n];
    f[0] = 0; f[1] = 1;
    for (i = 2, ..., n)
        f[i] = f[i - 1] + f[i - 2];
    return f[n];
}

fib2(n) is linear in n.
### Why Does it Matter?

</tbody>
</table>

*Table 2.1* The running times (rounded up) of different algorithms on inputs of increasing size, for a processor performing a million high-level instructions per second. In cases where the running time exceeds $10^{25}$ years, we simply record the algorithm as taking a very long time.
Course Outcomes

1. An understanding of classical problems in Computer Science
2. An understanding of classical algorithm design and analysis strategies
3. An ability to analyze the computability of a problem
4. Be able to design and analyze new algorithms to solve a computational problem
5. An ability to reason algorithmically
