# **Overview and Heuristic Evaluation**

SWE 632 Fall 2023

© Thomas LaToza

#### In class exercise

 Write down at least 3 characteristics that makes something usable

#### **Characteristics of usability**

### **Characteristics of usability**

- ease of use
- productivity
- efficiency
- effectiveness
- learnability
- retainability
- user satisfaction

#### **Usable or unusable?**

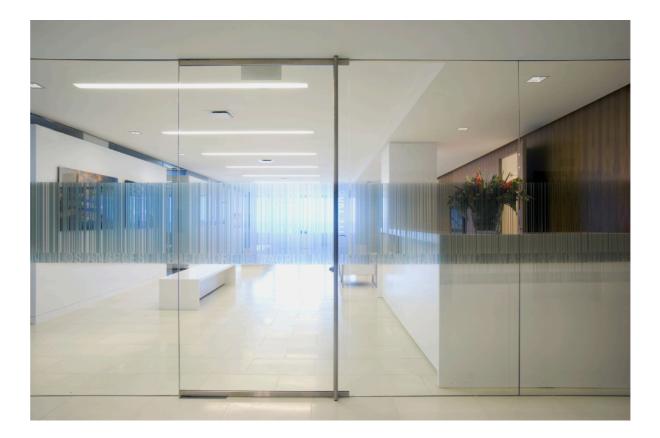

A teapot

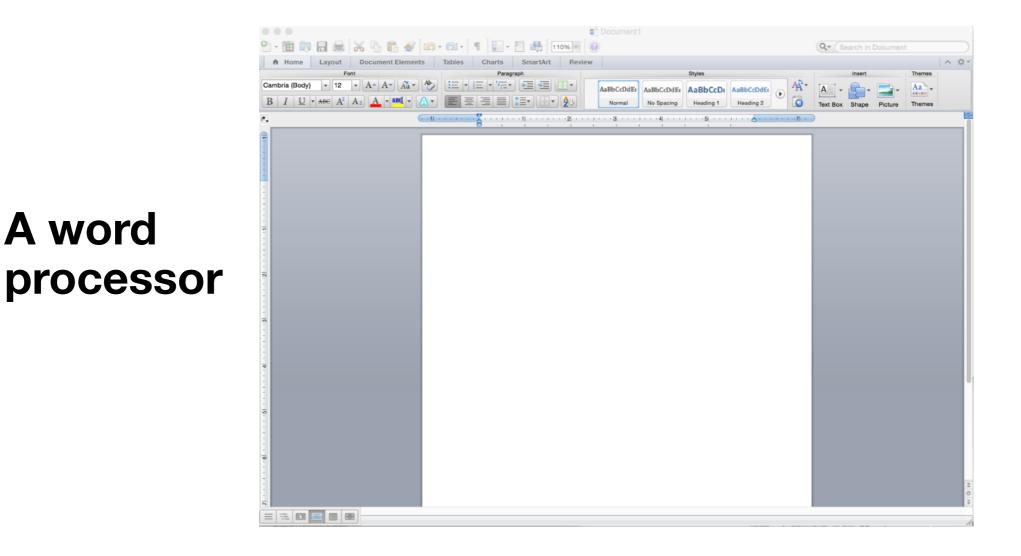

#### From Don Norman, Emotional Design

#### **Usable or unusable?**

# Usable or unusable?

# Usability

- A property of the relationship between
  - humans with goal-driven tasks
  - an artifact
- The speed and success with which the goals can be accomplished (task performance)

# Needfinding

 Given an existing artifact and humans doing a set of tasks, determine goals and identify usability issues that decrease task performance

#### **User-centered design**

 Given humans with goals and tasks, design an artifact that helps to accomplish these tasks

# Iterative User-centered design

 Given humans with goals and tasks, redesign an existing artifact that helps to accomplish these tasks faster and more successfully

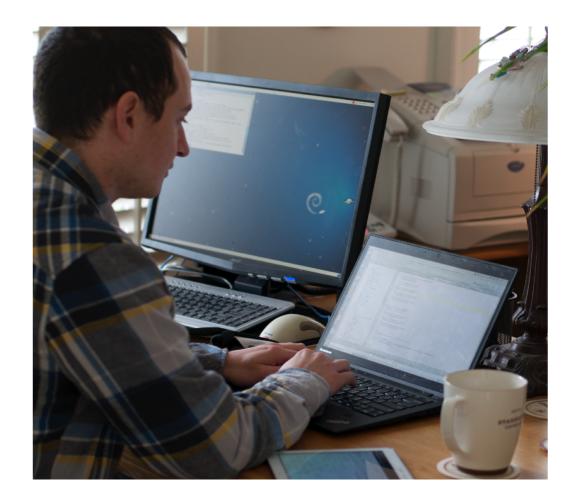

Evaluate

# **Usability evaluation**

• Given humans with goals and tasks and a new artifact, identify usability issues that decrease task performance

# **Empirical: Usability evaluation study**

- Given humans with goals and tasks and an artifact, observe humans to identify usability issues that decrease task performance
- (ground truth)

### **Analytical: Usability principles**

- Given humans with goals and tasks and an artifact, assess for conformance to UI principles to identify usability issues that decrease task performance
- (lightweight approximation of ground truth)

#### Why study usability?

"The results show that in today's applications, an average of 48% of the code is devoted to the user interface portion.
The average time spent on the user interface portion is 45% during the design phase, 50% during the implementation phase, and 37% during the maintenance phase."
Myers & Rosson, CHI'92

# Why study usability?

Adapted from Maneesh Agrawala & Bjoern Hartmann

# Life-Threatening Errors

- 1995 American Airlines jet crashed into canyon wall, killing all aboard
- On approach to Rozo airport in Colombia
- Pilot skipped some of the approach procedures
- Pilot typed in "R" and system completed full name of airport to Romeo
- Guidance system executed turn at low altitude to head for Romeo airport
- 9 seconds later plane struck canyon wall
- Is the pilot to blame?
- <u>http://en.wikipedia.org/wiki/</u> <u>American Airlines Flight 965</u>

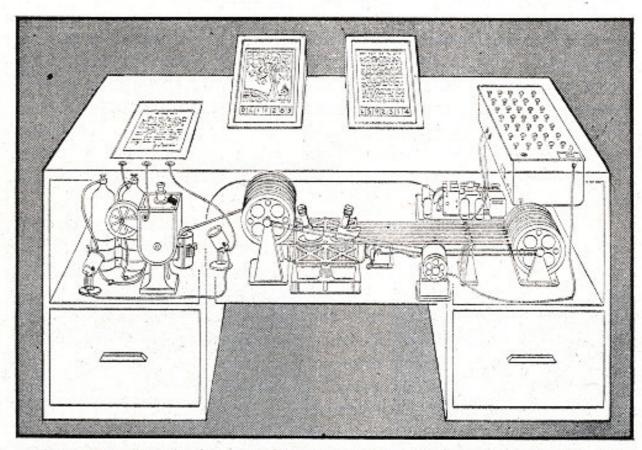

# What usability is not

- Not "dummy proofing"
- Not being "user-friendly"
- Not just "usability testing"
- Not just making software pretty

# As we may think

- Vannevar Bush, The Atlantic, July 1945
- Described the Memex and predicted hypertext, personal computers, the Internet, the WWW, speech recognition, online encyclopedias

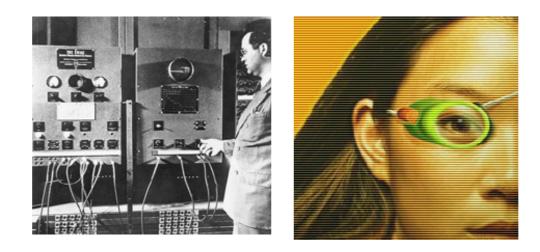

**MEMEX** in the form of a desk would instantly bring files and material on any subject to the operator's fingertips. Slanting translucent viewing screens magnify supermicro-film filed by code numbers. At left is a mechanism which automatically photographs longhand notes, pictures and letters, then files them in the desk for future reference.

#### The user is NOT like me

• Understanding user needs, tasks, goals

#### **Human-Computer Interaction**

"a discipline concerned with the design, evaluation, and implementation of interactive computing systems for human use and with the study of major phenomena surrounding them." ACM SIGCHI Curriculum Development Group Report, 1992

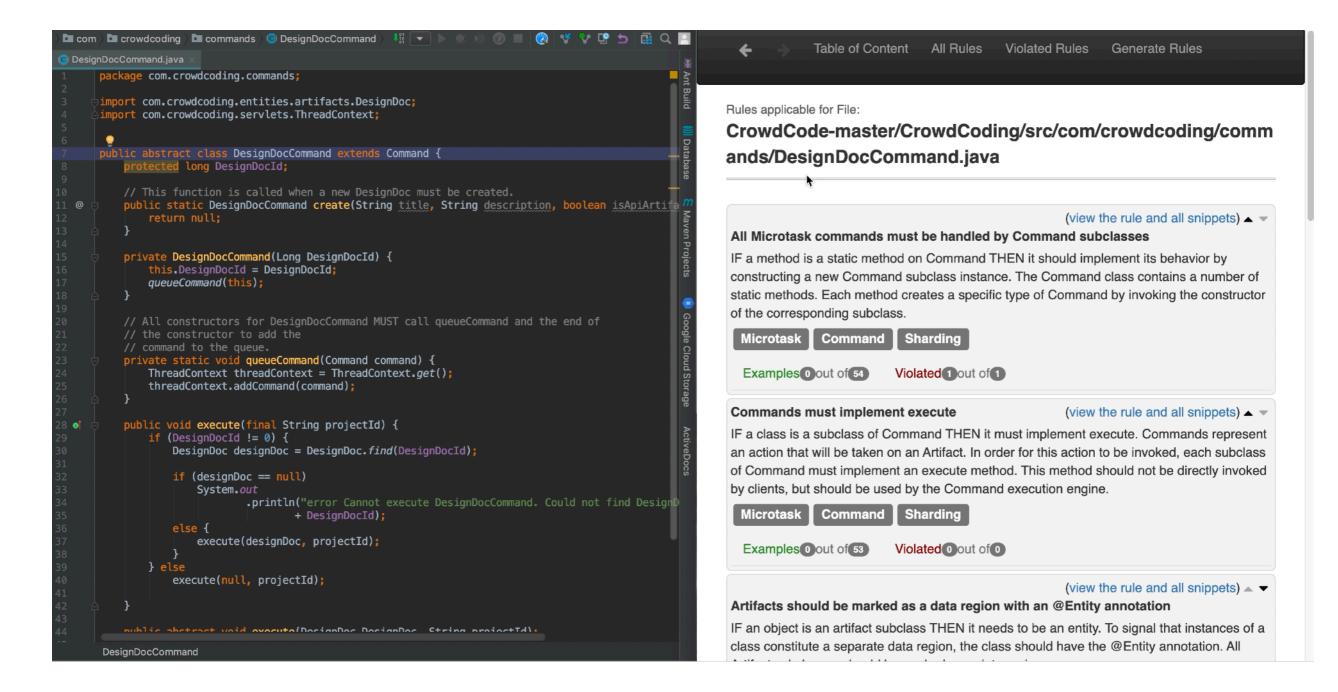

#### This course

- Comprehensive introduction to usability and humancomputer interaction (HCI)
- Basic cognition, user-centered design, usability evaluations, principles for UI design

#### Instructor

- Thomas LaToza Associate Professor, Computer Science Office: ENGR 4431
- Research interests: software engineering, human-computer interaction, crowdsourcing
- Studies how developers interact with code and designs new ways to program.
- Have conducted dozens of user studies, including interviews, surveys, think-aloud usability studies, controlled experiments, field deployments

#### **Graduate Teaching Assistant**

- Divesh Upreti
- Office hours: TBA

#### Resources

- Course website Syllabus, Schedule
- Piazza Announcements, Assignments, Discussion, Questions
- Blackboard grades

# HWs (a.k.a. "project")

- Build a (really simple) web app
- Use usability concepts and methods to identify usability issues
- Iteratively improve your app to address usability issues
- HW1: build app
- Remaining HWs: find usability issues and fix
  - Note: you'll be focused on improving usability not building parts of the app you didn't build before

# **HWO**

- Due next Tuesday before class
- Form a group of 1, 2, or 3
- Pick an app to build
- Describe what you propose to build in ~1 paragraph

# **Examples of project apps**

- Restaurant online ordering site
- Class schedule creator
- Sports statistics browser
- Fashion storefront
- Word guessing game

# Policy on code reuse

- Can borrow code from online sources as much or as little as you'd like.
- You must document instances of code that you reuse.

# Late HW assignments

- HWs will often involve peer evaluations
- Can submit up to 24 hours late, lose 10%
- HW submissions more than 24 hours late will receive a 0

#### **Tech talks**

- 14 minute overview of a front-end web technology or UX tool
- Groups of 4
- Use piazza to find a partner, reserve topics
- Only 1 group can cover a technology
- Signup by start of class next Tuesday

#### **SWE Subject Pool**

- To gain experience in user studies, you will participate in 6 hours of user studies, split across 2 or 3 studies
- All studies will be remote, with times on evenings & weekends
- Will have mechanism for signing up for studies details on Piazza

# In class activities

- Each class will include an extended in-class activity in small groups
- Practice methods on small examples
- Will generate a small hand-written deliverable
- Graded
  - Satisfactory: put forth a good effort in accomplishing the activity's goals (10/10)
  - Needs improvement: substantially misunderstood the activity or did not make meaningful progress (5/10)
  - Not present: did not submit deliverable from activity (0/10)
- To accommodate planned or unplanned absences, three lowest scores (including absences) dropped
- Turn in at the end of class

#### Exams

- Midterm exam and comprehensive final
- Includes both in class lectures and material from assigned readings
- Mix of multiple choice, short essay
- In-class, closed book

#### Grades

- In-Class Activities: 10%
- Tech talk: 5%
- HWs and project presentation: 30%
- SWE Subject Pool participation: 10%
- Mid-term exam: 20%
- Final exam: 25%

### **Heuristic evaluation**

- "Discount usability engineering methods"... Jakob Nielsen
- Involves a small team of evaluators to evaluate an interface based on recognized usability principles
- Heuristics—"rules of thumb"

Adapted from slides by Bonnie John and Jennifer Mankoff

#### **Heuristics**

- I. Visibility of system status
- 2. Match between system and the real world
- 3. User control and freedom
- 4. Consistency and standards
- 5. Error prevention
- 6. Recognition vs. recall
- 7. Flexibility and efficiency of use
- 8. Aesthetic and minimalist design
- 9. Help users recognize, diagnose, and recover from errors
- 10. Help and documentation

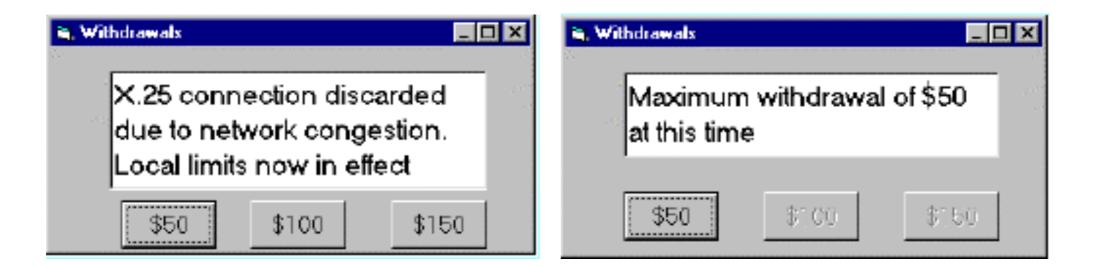

# H1: Visibility of System Status

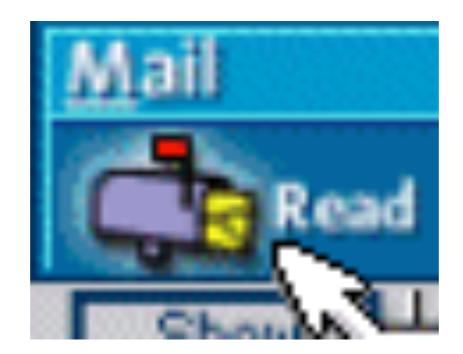

Time Left:	00:00:19	searching database for matche	S
			46%

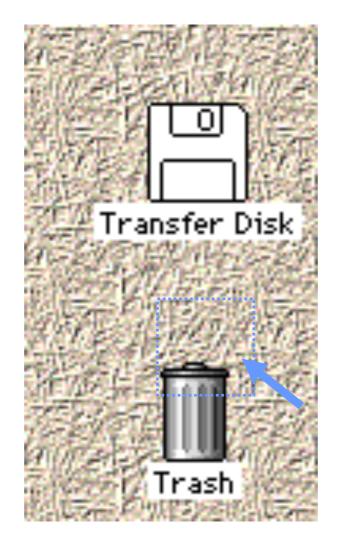

- What input has been received--Does the interface above say what the search input was?
- What processing it is currently doing--Does it say what it is currently doing?
- What the results of processing are--Does it give the results of processing?
- Feedback allows user to monitor progress towards solution of their task, allows the closure of tasks and reduces user anxiety (Lavery et al)

#### H2: Match between system and the real world

- Speak the users' language
- Follow real world conventions

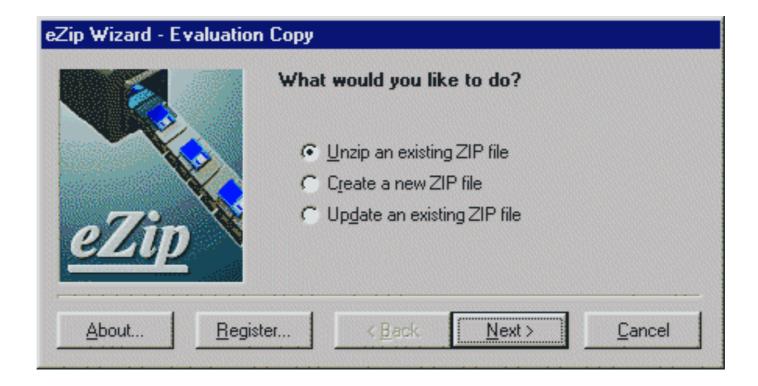

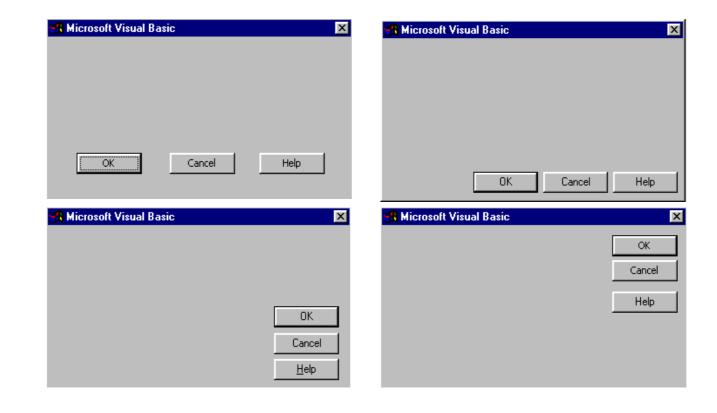

## H3: User Control and Freedom

- "Exits" for mistaken choices, undo, redo
- Don't force down fixed paths

# H4: Consistency and Standards

- Same words, situations, actions, should mean the same thing in similar situations; same things look the same, be located in the same place.
- Different things should be different

## **H5: Error prevention**

 Careful design which prevents a problem from occurring in the first place

that Where:	1 2 3 4 5 6 7				

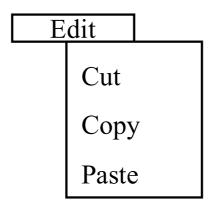

## H6: Recognition rather than recall

Make objects, actions and options visible or easily retrievable

# H7: Flexibility and Efficiency of Use

- Accelerators for experts (e.g., gestures, kb shortcuts)
- Allow users to tailor frequent actions (e.g., macros)

#### H8: Aesthetic and Minimalist design

Interfaces should not contain irrelevant or rarely needed information

H9: Help users recognize, diagnose, and recover from errors

- Error messages in language user will understand
- Precisely indicate the problem
- Constructively suggest a solution

# H10: Help and documentation

- Easy to search
- Focused on the user's task
- List concrete steps to carry out
- Always available

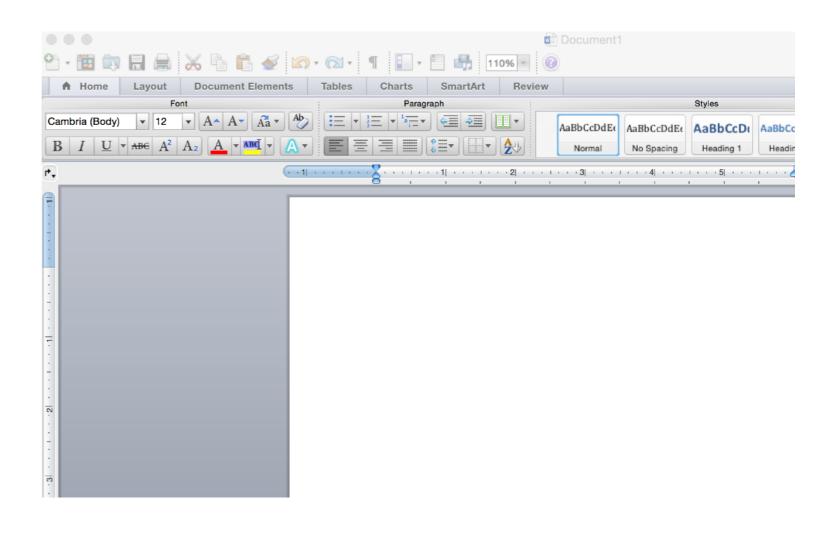

## Example

- I. Visibility of system status
- 2. Match between system and the real world
- 3. User control and freedom
- 4. Consistency and standards
- 5. Error prevention
- 6. Recognition vs. recall
- 7. Flexibility and efficiency of use
- 8. Aesthetic and minimalist design
- 9. Help users recognize, diagnose, and recover from errors
- 10. Help and documentation

#### Example

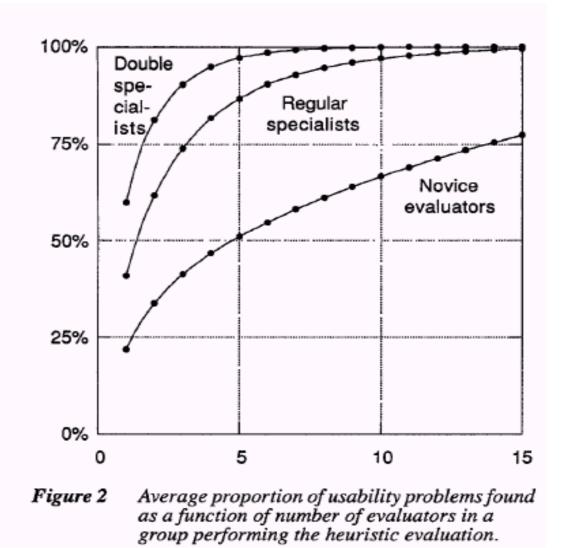

- I. Visibility of system status
- 2. Match between system and the real world
- 3. User control and freedom
- 4. Consistency and standards
- 5. Error prevention
- 6. Recognition vs. recall
- 7. Flexibility and efficiency of use
- 8. Aesthetic and minimalist design
- 9. Help users recognize, diagnose, and recover from errors
- 10. Help and documentation

# **Using heuristic evaluation**

- Can be used informally to identify issues in a website
- Can be used as a more formal usability inspection method
- Evaluators each first separately identify issues
- Issues then combined from each evaluator

# Heuristic evaluation in groups

## **Advantages of HE**

- "Discount usability engineering" Intimidation low
- Don't need to identify tasks, activities
- Can identify some fairly obvious fixes
- Can expose problems user testing doesn't expose
- Provides a language for justifying usability recommendations

# **Disadvantages of HE**

- Un-validated
- Do not employ real users
- Can be error prone
- Better to use usability experts
- Problems unconnected with tasks
- Heuristics may be hard to apply to new technology

# Ways to use HE

- Early in design process to catch major issues
- When time or resources are not available for empirical usability evaluation

# In class activity

- Form groups of 3 or 4
- Together select an application or website (e.g., Excel, Google Maps, Mason CS website)
- Work individually to identify at least 6 usability issues, reflecting at least 4 different heuristics
- For each issue, identify the heuristic, identify the functionality in the application, and summarize how the heuristic is violated in a few sentences

# **Heuristics - Find 6 Issues**

- I. Visibility of system status
- 2. Match between system and the real world
- 3. User control and freedom
- 4. Consistency and standards
- 5. Error prevention
- 6. Recognition vs. recall
- 7. Flexibility and efficiency of use
- 8. Aesthetic and minimalist design
- 9. Help users recognize, diagnose, and recover from errors

10. Help and documentation
